

How to Edit your website content:

1. Go to Pages
2. Click on the blue link for the page you want to edit. This will get you into the main editor for your content, the block editor.
3. At the top of the editor is a button labeled "Build on the Front End." Click this button to get to the visual editor. As a caution, know that you can easily slide or delete sections, but if you catch the mistake, press CTRL+Z to undo your last move.

Visual Builder / Front End Editing

As you hover over sections, they will be outlined in purple, blue, green, or gray. Each outline will have an edit box of the same color. You want to edit the GRAY box by clicking the cog.

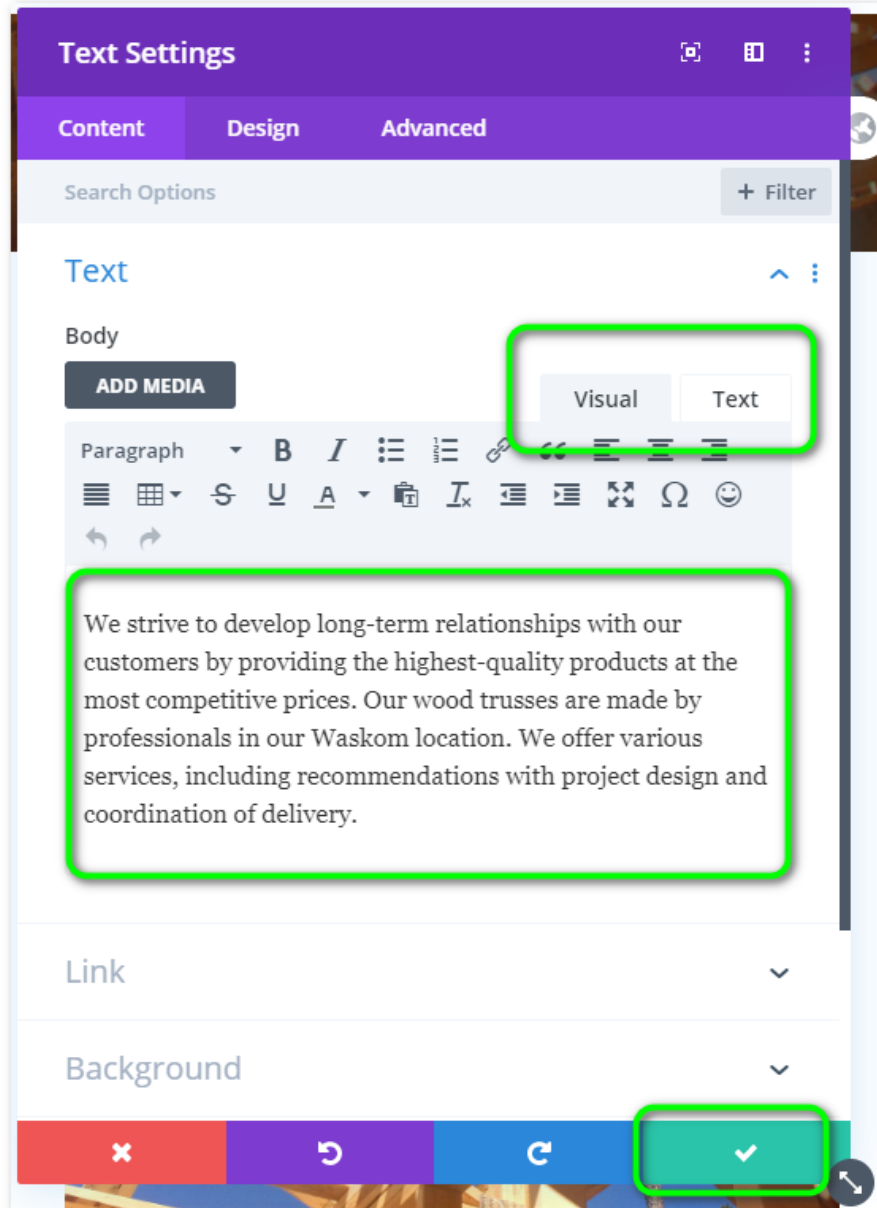

After clicking the cog, a text editor will pop up.

Make sure the “Visual” tab is selected. “Text” will be used if you’d like to use HTML to edit.

You can edit the whole text box and watch your changes appear on the page as you do them.

Make sure to hit the green “✓” to accept your changes to that text.

SAVE: To save the WHOLE PAGE and PUBLISH changes, find the small purple circle at the bottom of the page. Clicking it will expand a menu and you can find SAVE to the right:
